SIMULATED SPOT EXCHANGE · DEMO FUNDS

Trade on an engine you can see into.

Practise buying and selling BTC, ETH, SOL and BNB against USDT with 10,000 demo USDT. Every order shows its place in the book, its fills and the ledger entries it writes.

Create a demo account | Browse markets

No card and no real money. New accounts start with 10,000 USDT.

How the exchange works

01

Price first, then time

Orders at the same price fill in the order they arrived. The ladder shows each price as a queue, with your orders marked.

02

Every move on the ledger

Locks, fills and fees each write a ledger entry. Your balance is always the sum of those entries, and you can read every one.

03

Live, then checked

The book, trades and candles stream as they happen. If your connection drops, the page reloads them from the source instead of guessing.

04

Always someone to trade with

A market-maker bot quotes five price levels on each side of every market, so your order has a counterparty day and night.

05

Practice money, real mechanics

Deposits and withdrawals are simulated end to end, including fees, minimums and an admin review before money leaves.

06

Two-factor sign-in

Turn on authenticator codes, sign in with Google, and see every device that holds a session. Sign any of them out in one click.

Start with 10,000 demo USDT.

Make an account, place your first order, then watch it move from the queue to the ledger.

Create a demo account

ORICHAL

A simulated spot exchange for BTC, ETH, SOL and BNB against USDT. Demo funds only: no real money and no blockchain.

3 of 3, oldest first

Approve

Completes the transfer, sets a transaction hash and writes `withdrawal` and `withdrawal_fee` entries to the user's ledger.

Reject

Asks for a reason the user will see, then unlocks the full amount with a `withdrawal_unlock` entry.

System

Checked 14:32:12 · refreshes every 5 s

Open Grafana ↗ | RS Rohan Sethi

MongoDB — ✓ Healthy

Replica set rs0: a primary and two secondaries.

`ping 3 ms`

Redis — ✓ Healthy

Append-only file on. Memory in use:

41 / 256 MB

Matching engine — ✓ Leading

Leader `engine-7f2c`, last heartbeat 2 s ago. The lock renews every 5 s and lapses after 15 s.

Command streams — ✓ Keeping up

1 command waiting across 4 markets.

`oldest 0.2 s`

WebSockets — ✓ Healthy

38 open connections.

`api-1 21 · api-2 17`

API instances — ✓ 2 of 2 ready

Both answer `/health/ready` behind the load balancer.

Engine, market by market

One writer per market, one command at a time

MARKET	STATUS	WAITING	LAST COMMAND	BOOK LEVELS	LAST TRADE	MARKET MAKER
BTC/USDT	Open	0	place · 14:32:10.091	12 bids · 12 asks	14:32:07	Quoting 5 a side
ETH/USDT	Open	0	cancel · 14:31:58.402	9 bids · 11 asks	14:31:40	Quoting 5 a side
SOL/USDT	Open	1	place · 14:32:09.877	10 bids · 10 asks	14:31:51	Quoting 5 a side
BNB/USDT	Halted	0	config · halt · 13:05:00.120	0 bids · 0 asks	13:04:52	Ladder cancelled

Prometheus scrapes `/metrics` on both API instances and the engine. If the engine stops renewing its lock, a standby rebuilds the books and takes over.
